

2023 CASTLE VALLEY CLEAN-UP

Castle Valley Spring Clean-Up is scheduled for April this year. Stay tuned for the date! While collecting and hauling of solid waste continues to increase, there has been little to no charge to Castle Valley residents for this event. Landfill space remains finite so work has begun to make this year's activity more sustainable.

It is not too early to begin thinking about items no longer needed around your property. Building on last year's efforts, we have additional ideas this year to encourage and engage you to find homes for items with life left in them instead of tossing them into the landfill.

Castle Valley Community Facebook Page has proven effective in finding homes for items no longer useful to you. **DON'T DO Facebook! No worries!** This year we have someone who is happy to help you get your item on the Community Facebook page. Just take a snapshot of the item and send it to Betty Ann at betty.ann33@gmail.com. She will post it for you. Typically, items are FREE on Facebook so make sure you let Betty Ann know if you want cash for the item.

Finding someone who can use leftover bricks or a new item in an original container may be easy. What to do with an old lawn mower or left-over can of paint or partial bag of fertilizer? Diane Ackerman at dianeackerman13@yahoo.com will be happy to advise and answer questions about any item before you toss it in the garbage. (Learn more at swssd1.org)

REDUCE, REUSE, RECYCLE & COMPOSTING & FOOD WASTE WORKSHOPS

Come See and be inspired to build your own Repurposed Recycle Bins!

FREE OUTDOOR WORKSHOPS

Saturday April 1 and Saturday April 8 at 10 AM—Noon at Castle Valley pavilion.

(Dress warmly, but in case of inclement weather, we will move indoors.)

The first half of each workshop will explore what is recyclable and how to recycle in this area. We will look at product packaging--is it recyclable and look at alternatives with little or no packaging.

The second half of each workshop will explore how organic/yard and kitchen wastes can be recycled to shrink your garbage load and generate soil. We will be visiting Castle Valley sites to see successful composting endeavors. Questions? Diane dianeackerman13@yahoo.com Betty Ann betty.ann33@gmail.com, Jocelyn townclerk@castlevalleyutah.com
